

2. Take the 4 AA batteries and wire them in succession. Wire the positive terminal of one to the negative terminal of another, until all four are connected except one positive terminal and one negative terminal. Even though the four AA batteries only combine to create 6 volts, the increase in amperage is necessary to activate the solar igniter quickly and effectively.
3. Take the battery pack (made in step 2) and wire one end of it to the relay's single pole and the other end to one prong of the solar igniter. Then wire the other prong of the solar igniter back to the open position on the relay.
4. Using double sided carpet tape mount the kit in his locker, mailbox, or car door. And last, insert the solar igniter into the rocket engine (smoke bomb or m-80).

Your kit is now complete!

52. How to Start A Conference w/o 2600hz or M-F by The Jolly Roger

This method of starting the conf. Depends on your ability to bullshit the operator into dialing a number which can only be reached with an operator's M-F tones. When bullshitting the operator remember operator's are not hired to think but to do.

Here is a step-by-step way to the conf.:

Call the operator through a pbx or extender, you could just call one Through your line but I wouldn't recommend it.

Say to the operator: TSPS maintenance engineer, ring-forward to 213+080+1100, position release, thank you.(she will probably ask you for the number again) Definitions:

Ring-forward instructs her to dial the number.

Position release instructs her to release the trunk after she has dialed the number.

+ - remember to say 213plus080 plus1100.

3. When you are connected with the conf. You will here a whistle blow twice and a recording asking you for your operator number. Dial in any five digits and hit the pounds sign a couple of times. Simply dial in the number of the billing line ect. When the recording ask for it. When in the control mode of the conf. Hit '6' to transfer control. Hit '001' to reenter the number of conferee's and time amount which you gave when you stared the conf. Remember the size can be from 2-59 conferee's. I have not found out the 'lengths' limits.

53. How to Make Dynamite by The Jolly Roger

Dynamite is nothing more than just nitroglycerin and a stabilizing agent to make it much safer to use. The numbers are percentages, be sure to mix these carefully and be sure to use the exact amounts. These percentages are in weight ratio, not volume.
